1. Did you capture the set of customers and their wants?

2. How did you convert the wants into engineering specs (metrics) that can drive the design?

3. How has benchmarking enabled you to include current technology?

4. What distinct concept directions have emerged?

5. Are the concepts workable?

6. How have you identified the machine elements and their load and life requirements?

7. How are you better able to define the problem statement?

8. What is your plan toward a successful project conclusion?
